Homework set 4 — APPM5440

From the textbook: 1.27, 2.2, 2.3, 1.19.

Problem: Show that on any set $X$, uniform convergence implies pointwise convergence.

Problem: Let $X$ be a finite set. Show that pointwise convergence on $X$ implies uniform convergence.

Problem: Let $X$ be an infinite set. Construct a sequence of functions $f_n : X \rightarrow \mathbb{R}$ that converges pointwise, but does not converge uniformly.

Problem: Let $X = [0, \infty)$. Construct a sequence of functions $f_n : X \rightarrow \mathbb{R}$ that converges uniformly (and hence pointwise), but that does not converge in $L^2(X)$.

Problem: Let $X = [0, 1]$. Construct a sequence of functions $f_n : X \rightarrow \mathbb{R}$ that converges in $L^2(X)$ but such that the sequence of numbers $(f_n(x))_{n=1}^{\infty}$ does not converge for any $x \in X$.
